

THE HIGHLANDER SCRIPT LOGIC

October 20, 2016

During data entry for previous quarters, partners could report both **finer** (<1, 1-4, ...) and **coarse** (</+15) age disaggregates into DATIM, making it difficult to get an accurate picture of PEPFAR results by sex and child/adult groups. To arrive at this more accurate figure, we would need to select only one of the disaggregate to use per site and DSD/TA, based on the logic steps below. For HTC, the result disaggregate is used for the numerator in the completeness check as opposed to the total numerator.
